Availability List

02 September 2010

How to Use this List

This list shows what varieties are currently available and at which sizes. It's linked real-time to our database and is updated very frequently. If an item is listed here, it's available for our Distributors to order but they may not necessarily have that item in stock right now. If you see something you're interested in purchasing through your favoured Distributor, you can ask them to obtain it for you.

Price Categories

The price categories are broadly as follows:

A = inexpensive items, usually in good supply and also easy to grow.

B = medium priced items, either quite rare and new or sometimes less easy to grow/produce.

C = high prices items, usually new introductions currently in very short supply, and/or difficult to grow/produce.

The actual prices charged by individual Distributors are likely to follow the general categories above but they are not bound by any obligations on pricing and if you wish to judge whether the price charged by a Distributor for a particular item is fair, the best way may be to compare prices between them. In countries with several Distributors, they are in competition with one another. It's worth bearing in mind that price may not be the only factor to consider in choosing which Distributor to order from. Each Distributor receives exactly the same standard of produce from us but their costs of sale may vary a great deal depending upon how they handle the plants after receiving them. Some may sell them on quickly, others may take a considerable time re-establishing them before reselling. The obvious advantages in establishing the plants may be offset by the necessity to charge a higher price. It's a matter of your personal preference which Distributor you choose. We don't recommend one Distributor over another.

Size Categories

These are the size categories we use when shipping. Please note that the Distributors are free to use different criteria for deciding whether a plant is small, medium, large etc.

Plant Sizes

The size of plants is categorised by measurement across the leaf span from leaf-tip to leaf-tip, not including tendrils and pitchers. There are 4 size categories:

S = between 5cm and 8cm (2" and 3") unless otherwise stated

M = between 8cm and 15cm (3" and 6")

L = between 15cm and 30cm (6" and 12")

XL = larger than 30cm (12")

Nepenthes species

Nepenthes adnata A small delicate species from West Sumatra. Pitchers are cylindrical and beautifully colored with black or dark purple spots. The leaves are fringed with soft brown hairs.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3350	Single selected clone.	Obtained in-vitro from a 3rd party, we are informed that this is the true species but cannot guarantee it. Colouration is not yet known.	Intermediate	S	A

Nepenthes alba An easy to grow species from Gng. Tahan in Peninsular Malaysia. This species has similar traits to *Nepenthes gracillima* with which it is easily confused.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3299	random selection from 8 clones	All pitchers show good colouration even at a very young age. In high light levels leaves also become dark red.	Highland	S	A

Nepenthes albomarginata Slender graceful pitchers. The pitcher colourations vary but always have the characteristic white band below the peristome.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3004	Brunei, assorted clones	Mostly with green pitchers. Random assortment from 24 clones.	Intermediate	S M L	A
BE-3318	From seed, all individuals.	From Ringlet, Cameron Highlands. It appears that all will be green with red flecks and red peristome. This is a very limited release from seed, less than 150 individuals.	Intermediate	S M L	A
BE-3003	Penang, assorted clones	A variety of colourations, mostly with red striped pitchers. Random assortment from 24 clones.	Intermediate	S M	A
BE-3360	Ringlet, Cameron Highlands	As for BE-3318 but a random assortment from 5 clones.	Intermediate	S M L	A

Nepenthes ampullaria This swamp-dwelling species is one of the few that will develop basal rosettes when larger giving the appearance of a carpet of pitchers with no leaves. Loves high temperatures and humidity. Pitchers are globose and vary enormously in colouration.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3328	'Borneo sunset'	This is a very nice cultivar with striated red peristome and very unusual yellow/green pitcher body. These are large plants from cuttings of a single clone originally raised from seed of the same batch that gave rise to the range of 'Harlequin', 'Brunei red' and 'Williams red' cultivars.	Lowland	L	A
BE-3304	bronze Nabire	This form of the species from Nabire in Papua has a distinctive bronze tint to the peristome. The parent plant had almost black speckling to the pitcher body	Lowland	S M L	A
BE-3288	'Brunei Red' x 'Harlequin'	Another nice red fom of the species, similar to BE-3285 but different parentage. A random assortment from 44 clones. Parentage is CR28 x CR-48 ('Brunei red' x 'Harlequin')	Lowland	S M L	A
BE-3012	Brunei red, assorted clones	Varies from red to very red pitchers, sparingly speckled with green. Random selection from 51 clones propagated from cuttings, hence only available at large size upwards.	Lowland	L XL	A
BE-3006	Brunei, green, assorted clones	All green pitchers. Most plants of size L or XL bear numerous basal offshoots.	Lowland	S M L XL	A

BE-3007	Brunei, red speckled, assorted clones	Red speckled pitchers. Most plants of size L or XL bear numerous basal offshoots. Random assortment from 6 clones.	Lowland	S M L XL	A
BE-3011	'Cantley's Red', single clone	More globose pitchers than is usual for the Brunei form of this species. Pitcher colouration is green speckled on a red background. Derived from cuttings taken from the very plant shown in Adrian Slack's book "Insectivorous Plants and How to Grow Them".	Lowland	L XL	A
BE-3283	'Harlequin'	Green and purple speckled on red background, very striking! A random assortment from 34 clones. Parentage is CR1 x CR-48 ('Williams red' x 'Harlequin')	Lowland	S M L	A
BE-3286	'Harlequin'	Green and purple speckled on red background, very striking! A random assortment from 31 clones. Parentage: CR28 x CR-48 ('Brunei Red' x 'Harlequin')	Lowland	S M L	A
BE-3015	'Harlequin', assorted clones	Green and purple speckled on red background, very striking! Random selection from 16 clones propagated from cuttings, hence only available at large size upwards. Formerly sold as <i>Nepenthes ampullaria</i> 'Tricolor'.	Lowland	L XL	A
BE-3009	'Williams' Red'	Dark burgundy-red pitchers with almost no green. This is the deepest and purest red form of this species we have ever seen. Simply stunning! Formerly sold as clone CR-1. Propagated from cuttings, off a single seed-grown parent, hence only available at large size upwards.	Lowland	L	B
BE-3285	'Williams Red' x 'Harlequin'	Another nice red fom of the species, similar to BE-3288 but different parentage. A random assortment from 36 clones. Parentage is CR1 x CR-48 ('Williams red' x 'Harlequin')	Lowland	S M L	A

Nepenthes argentii This miniature *Nepenthes* is probably the smallest in the genus. Pitchers are red/purple with unique peristome extending to beneath the lid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3021	assorted clones	Random assortment from 24 clones.	Highland	S	A

Nepenthes aristolochioides Having one of the most unique and unusual pitcher shapes in the genus, this species is highly sought after by collectors. The pitchers are inflated like a balloon and have a mouth which opens on the side. This is the first time this species has ever been offered with a quantity discount at these prices.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3023	typical	Random assortment from 3 clones.	Highland	S	B

Nepenthes bellii A vigorous miniature lowland species, bearing pitchers that are similar in form to the giant *N. merrilliana* but a tiny fraction of the size. One of the smallest species in the genus, this is ideally suited for warm terrarium growing.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3026	from a single clone	From a single clone selected for it's vigor and orange colour out of 24 clones.	Lowland	S M	A

Nepenthes bicalcarata The 'fanged' pitcher plant. This swamp-dwelling species is one of the strangest having two thorns projecting down from the top of the peristome. Grows alongside *N. ampullaria* in the wild and likes hot humid conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3029	Brunei, orange, assorted clones	SPECIAL OFFER FOR SEPTEMBER 2010 ! 3 for 2 on size M or Larger Typical form and colouration with yellow and orange pitchers. Random assortment from 12 clones.	Lowland	S M L	A

BE-3031	Brunei, red flush, assorted clones	Red flush pitcher colouration on orange background. Random assortment from 3 clones.	Lowland	S M	A
BE-3356	From a single clone.	This form is affectionately known as 'Red Shorthorn', and has red- flush pitchers with teeth that are only about half the usual length for the species. It may perhaps be a complex hybrid, but in all other respects appears as typical <i>N. bicalcarata</i> .	Lowland	S	A
BE-3336	Sarawak Giant Red, assorted clones	As for BE-3335 but a random selection from 12 clones.	Lowland	S M	A
BE-3335	Sarawak Giant Red, from seed.	This is easily the largest form of the species we have ever seen or heard about. The discoverer, a well known taxonomist and author, recorded pitchers in habitat up to 30cm (12") in diameter, all either deep brick red or in some cases a dusky brown. The notes from his journal read: "The giant red bical here are like none I have ever seen. The pitchers are enormous and very round and wide. Also the color is pure deep purple-red with absolutely no trace of green. The best bical I have seen for sure." Limited release of all different individuals from seed.	Lowland	S	A

Nepenthes bongso

This is a variable species from Sumatra. Most varieties have a wide peristome and red to purple pitcher colouration.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3036	purple	Deep red pitchers. From a single clone.	Highland	S M L	A

Nepenthes boschiana

Rare spectacular species from southern Borneo. Peristome is dark purple with elongate purple flecked pitchers.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3361	all different individuals from seed	This is the first ever release of seed-grown <i>Nepenthes boschiana</i> . The male parent is our BE-3039 from Gng. Besar and the female is a clone from another supplier with somewhat different appearance. This release is very limited in quantity and it will be up to a year before clones from the lab start to become available.	Intermediate	M	A

Nepenthes burbidgeae

Pitchers are usually red speckled on a cream background with red striped peristome. This is one of the most beautiful of all *Nepenthes*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3041	Pig Hill, assorted clones	Random assortment from 24 clones.	Highland	L	A

Nepenthes burkei

Endemic to the Philippines, this species has been confused with the similar *N. ventricosa* in the past, the true *N. burkei* being very rare in cultivation.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3254	Halcon, assorted clones	A random assortment from 5 clones. The true species at last! The red-spotted pitchers are up to 20 cm tall and have a wide red peristome.	Highland	S M L XL	A

Nepenthes copelandii

Lower pitchers are heavily striped with dark red on green background. Upper pitchers are curiously 'pipe shaped'. This species was lost to cultivation for many years and only recently rediscovered. Very vigorous and easy to grow!

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3046	Apo, assorted clones	Random assortment from 24 clones. Tubular lower pitchers.	Intermediate	S M L XL	A

Nepenthes danseri A recently described species from an ultramafic island near the north coast of New Guinea.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3050	typical	Large plants have multiple growing points and lush foliage. Pitchers are mostly green and red speckled on the inside. From a single clone.	Lowland	M	A

Nepenthes densiflora A rare and delicately toothed species from the higher mountains of Aceh, Sumatra.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3052	Leuser, assorted clones	Pitchers are mostly richly colored orange to dark red or purple with attractive wide peristome. Random assortment from 12 clones. Large and Extra Large plants lush prostrate form, leaves have red central vein with burgundy red pitchers.	Highland	S M	A

Nepenthes diatas From the alpine meadows of G. Bandahara comes this exciting species. Peristome has conspicuous teeth extending into the pitcher mouth. Pitcher colouration varies from orange to deep red. Easy and rewarding to grow.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3056	assorted clones, Bandaraha	Random assortment from 24 clones.	Highland	S M	A
BE-3055	assorted clones, unknown locale	Random assortment from 13 clones.	Highland	S	A

Nepenthes distillatoria Pitchers colouration is either yellow, pink or more rarely bright purple. This species has the rare ability to form attractive basal rosettes in a similar manner to *N. ampullaria* and *N. gracilis*. Naturally occurs in tropical swamps so needs high temperatures and humidity.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3057	pink, from seed	All different individuals from seed selected for their pink pitcher colouration.	Lowland	S M L	A

Nepenthes dubia Extremely rare in cultivation. This classic species is remarkable for its bizarre funnel-shaped pitchers which have an unusual reflexed lid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3062	G. Talakmau	All different individuals from seed. Pitchers on young plants can be orange in colour. Small size minimum diameter 5cm or 2".	Highland	S	B

Nepenthes ehippiata Similar in many respects to *N. lowii*, but pitchers are larger and fatter. Even at small size, the lower pitchers have a large lid with bristles on the underside.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3064	G. Raya	From a single clone, originating in Germany. Small size minimum diameter 5cm or 2".	Highland	S	A

Nepenthes eymae Exceptionally attractive species. Lower pitchers are richly coloured with dark purple peristome and pronounced keel and spur beneath the lid. Upper pitchers are uniquely funnel shaped. Easy grower.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3067	clone 2	From a single clone, originating in Germany. Lower pitchers have broad nearly black peristome.	Highland	L	A

Nepenthes fusca

Well known and popular epiphytic species with widespread distribution throughout Borneo. There are a number of distinct forms in cultivation.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3070	assorted clones, Sarawak	SPECIAL OFFER FOR SEPTEMBER 2010 ! 3 for 2 on size M or Larger This attractive variety has large orange and red-striped pitchers. It is also very vigorous and easy to grow. Highly recommended.	Intermediate	S M L	A
BE-3068	flared peristome	An unusual variety with a bizarre flared peristome and wide triangular leaves. From a single clone.	Intermediate	S M	A

Nepenthes glabrata

A charming species endemic to Sulawesi. Wonderful dainty globose lower pitchers and creamy-white uppers with bright red blotches.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3257	assorted clones	Random assortment from 3 clones	Highland	S M L	A

Nepenthes gracilis

Widespread and easy to grow species. These plants have multiple growing points and are ideal for warm terrariums. Like *N. ampullaria*, this species will also form basal rosettes of pitchers if the stems are pruned.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3074	nigropurpurea, Brunei	With sufficient light, the pitchers turn a very dark purple, nearly black. Juvenile plants do not display this colouration. From a single clone.	Lowland	L	A

Nepenthes gymnamphora

A widespread highland species from Sumatra and Java. Lower pitchers are bulbous and are produced in bunches at the base of the plant. Upper pitchers are very rare.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3077	assorted clones, Talakmau	These selected clones have pitchers which are mostly orange on a yellow background.	Highland	S	A

Nepenthes hirsuta

A distinctive Bornean species named for its hairy leaves and stems. Plants grow naturally in very shady habitats. Pitcher form is somewhat variable.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3083	assorted clones	Large greenish egg-shaped pitchers with purple speckles. Random assortment from 12 clones.	Lowland	S M L XL	A

Nepenthes inermis

Lower pitchers are usually yellow or lightly suffused with red. Upper pitchers are always yellow and have no peristome. Normally grows as an epiphyte in mossy forest and adapts well to cultivation.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3084	Belirang, assorted clones	Random assortment from 4 clones. Small size minimum diameter 5cm or 2".	Highland	S	B
BE-3085	Talang, assorted clones	Random assortment from 12 clones. Small size minimum diameter 5cm or 2".	Highland	S M	B

Nepenthes insignis

A large species from New Guinea with several distinctive forms.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3089	Biak	This variety has wide tubular pitchers which are lightly spotted with red. A fast grower.	Lowland	S	A

Nepenthes izumiae A recently described species featured in the book 'Nepenthes of Sumatra' by Charles Clarke as species B. Pitcher colouration is nearly black with contrasting white interior.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3090	Lusung Tungkut, assorted clones	Random assortment from 48 clones.	Highland	S M	A

Nepenthes jamban Has very large distinctive toilet shaped pitchers with vibrant red colouration. We were proud to be the first to introduce this species to cultivation from a sustainable source.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3276	random selection from 12 clones	These are vigorous and spectacular plants, all with good pitcher colouration.	Highland	S M	B

Nepenthes kerrii A very recently described new species from Satun, Southern Thailand.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3347	Satun, Thailand, from seed.	All different individuals from seed. Limited release of less than 170 plants total.	Lowland	S M	A

Nepenthes khasiana Typical yellow-green pitchers with red flush near the peristome. Easy grower, vigorous and very hardy. Will grow well in either highland or lowland conditions. Please note this is a CITES Appendix 1 species and some countries (e.g. Japan) may require additional CITES import permits.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3098	assorted clones	Random assortment from 4 clones.	Lowland	S M	A

Nepenthes kongkandana Not much is known about this plant at the time of writing and we cannot guarantee the nomenclature will hold.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3348	All different individuals from seed.	From Chana, close to Hat Yai. All different individuals from seed. Limited release of less than 120 plants total.	Lowland	S	A

Nepenthes lamii A small and delicate species from the high mountains of New Guinea, only recently introduced into cultivation.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3099	clone 2	From a single clone originating in Germany. Small size minimum diameter 5cm or 2".	Highland	S	B

Nepenthes lowii Fabulous species with extremely tough purple/green pitchers. Slow growing but highly rewarding since few other species have such contrasting and unique upper and lower pitchers.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3100	Trusmadi, assorted clones	Random assortment from 22 clones.	Highland	S	A

Nepenthes macfarlanei Pitcher colouration varies somewhat but is usually red speckled on cream background. Lower pitchers on mature plants have a carpet of soft whitish fur beneath the lid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3103	assorted clones, Genting	Random assortment from 3 clones.	Intermediate	S M	A

Nepenthes macrovulgaris Originating from north Borneo, this ultramafic species has egg-shaped pitchers with a somewhat variable colouration.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3107	Silam, assorted clones	Random assortment from 6 clones with green pitchers.	Lowland	S M	A

Nepenthes madagascariensis Pretty bright pink pitchers contrast nicely with the light green leaves.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3247	assorted clones	All different individuals from seed.	Lowland	S M	A

Nepenthes maxima Highly variable species from Sulawesi and New Guinea.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3303	Gng. Tangkoko, from seed.	This form of the species has a compact growth form. The pitcher and leaf size ratio is well balanced. It's a vigorous and easy easy grower. All different individuals from seed.n Few remaining!	Highland	S M	A
BE-3311	Tentena form. Random assortment from 10 clones.	Extremely vigorous and fast growing variety. Developing pitcher has attractive golden yellow peristome, with red speckled pitcher. In high light levels attractive red colouration develops in leaves.	Highland	S M L	A
BE-3112	Tinombala	In this form the pitchers usually look like giant <i>N. fusca</i> but with wider peristomes and black spots. All different individuals from seed.	Highland	L	A
BE-3319	Watutau dwarf. From a single clone.	Watutau dwarf. It appears that the pitchers will be richly striped red or purple.	Highland	S M	A

Nepenthes mikei Pitchers are deep purple, striped nearly black. Tendrils are very short and stout so that pitchers are held straight up, giving an attractive uniform appearance to the plant.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3121	assorted clones, Bandahara	Random assortment from 24 clones.	Highland	S M	A

Nepenthes mira An unusual species from Palawan which is closely related to *N. rajah*. Pitcher colouration is an unusual orange which it seems to consistently pass on to hybrids, sometimes in subtle ways, such as an orange tint to the peristome or pitcher body.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3123	assorted clones	Red or dark pink bulbous pitchers. Random assortment from 24 clones.	Highland	S M L XL	A
BE-3362	Cleopatra's Needle, from seed.	The first ever release of seed-grown individuals of this species from Cleopatra's Needle in Palawan, Philippines. If true to form, the pitchers will be of orange colouration. This is a limited release of less than 150 individuals from seed and it will be up to a year before clones from the lab start to become available.	Highland	S	A

Nepenthes mirabilis var. echinostoma A most extreme form of the species. The pitchers have a unique box shaped cross-section and the peristome on mature specimens has many upraised ribs.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3363	Purple. From a single clone.	Selected as the best of 24 clones for it's outstanding colouration, this exceptional clone has a deep purple pitcher body, only rarely observed in the wild.	Lowland	S M L	A

BE-3372 Red speckled.
From a single clone

This clone has a red speckled pitcher body.

Lowland

S
M

***Nepenthes mirabilis*
var. *globosa***

Formerly caled *N. viking*, this is a very colourful form of the species and an excellent candidate for hanging baskets in tropical conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3289	All different individuals from seed.	So far all individuals have turned out to be colourful. From the Trang Province of Thailand.	Lowland	S M L XL	A

Nepenthes neoguineensis

This species produces broad funnel-shaped upper pitchers which have very unusual wings that extend down the tendril. Lower pitchers are egg-shaped and often purple in color.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3151	Depapre, wide pitchers, assorted clones.	Random selection from 8 clones.	Lowland	S M	A

Nepenthes northiana

Very spectacular lowland species with absolutely beautiful scalloped peristome. Pitcher colouration is red speckled on cream background. Prefers shaded conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3357	Bau, single selected clone.	This species is now available on quantity discount for the very first time!	Lowland	S	A

Nepenthes ovata

Beautiful large pitchers with flared dark red or purple peristome. On mature plants there is a characteristic hook-shaped appendage on the undersurface of the lid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3133	Panglubao	Random assortment from 20 clones. Small size minimum diameter 5cm or 2".	Highland	S M L	A

Nepenthes pervillei

The only species known from the Seychelles, this beautiful plant is very rare in cultivation. It's renowned as a difficult grower and although it's supposed to be a lowland species, we've had most success in our highland nurseries.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3134	From a single clone.	Small plants are about 5-8 cm (2-3") in diameter and are healthy, with many leaves but few pitchers. There is now no limitation on orders of this item.	Intermediate	S	B

Nepenthes petiolata

Rare both in cultivation and the wild. Pitchers are spectacular, hairy and deep red with a veined structure.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3135	assorted clones	Random assortment from 24 clones.	Highland	S M	A

Nepenthes platychila

Newly described species from Borneo. The lower pitchers are cylindrical and resemble those of *N. fusca*. Upper pitchers are funnel-shaped and have an unusual very wide flat peristome which is beautifully striped with red, yellow, and purple. Very rare.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3266	assorted clones	Random assortment from 12 clones	Highland	S M L	B

Nepenthes rafflesiana One of the most variable of species, both in form and colouration - there are almost no two alike. Form varies from squat to elongata and from miniature to giant. Colouration varies from white through red to nearly black with all combinations in between.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3141	assorted clones	A random assortment of giant and elongata forms, including but not limited to BE-3144 (formerly clone 26) Discontinued note July 09, BE-3146 (formerly clone 88) & BE-3148 (formerly clone 99).	Lowland	S M L	A
BE-3353	Brunei 'elegans'	From Brunei, this clone was marketed many years ago as "L8/3/5", Or Nepenthes 'elegans', an elegant elongate form of the species. From a single selected clone	Lowland	S M	A
BE-3146	Brunei, giant, clone 88	Red pitched form. All from one clone, previously sold as rafg-88	Lowland	S M L	A
BE-3148	Brunei, giant, clone 99	The best dark form selected for it's striking colouration from hundreds of clones in the lab. The giant pitchers are mostly dark maroon in coloration with lime green peristome. All from one clone, previously sold as rafg-99.	Lowland	S M L	A
BE-3351	from a single clone	Obtained in-vitro from Singapore Botanic Gardens, this item may or may not be the same clone as BE-3352. Red speckled pitchers, probably typical form.	Lowland	S M L	A
BE-3352	from a single clone	Obtained in-vitro from Singapore Botanic Gardens, this item may or may not be the same clone as BE-3351. Red speckled pitchers, probably typical form.	Lowland	S M L	A

Nepenthes rajah The King of Nepenthes. The large peltate leaves produce enormous purple pitchers that have been recorded to consume small mammals! Never before offered at prices as low as this for legitimate artificially propagated plants. Please note this is a CITES Appendix 1 species and some countries (e.g. Japan) may require additional CITES import permits.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3152	assorted clones	Random assortment from 4 clones, originating in tissue culture from Royal Botanic Gardens, Kew.	Highland	S	A

Nepenthes ramispina Graceful species with smoky black pitcher colouration and striking lime-green interior.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3155	Genting, assorted clones	Random assortment from 3 clones.	Highland	S M L	A

Nepenthes reinwardtiana Slender pitchers with characteristic 'eye spots' on inside of pitcher body. Easy grower in intermediate conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3159	assorted clones	Random assortment from 6 clones	Intermediate	S M L	A

Nepenthes sanguinea Pitcher colouration varies from green through speckled to dark purple. This is an easy to grow species and highly recommended for beginners.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3312	Assorted Clones	A random selection. Wide variations in colour including salmon pink to dark burgundy red. Some have very broad leaves. Very vigorous grower.	Highland	S M L	A

BE-3162	assorted clones, Genting	SPECIAL OFFER FOR SEPTEMBER 2010 ! 3 for 2 on size M or Larger Random assortment from 24 clones.	Intermediate	S M L XL	A
---------	-----------------------------	--	--------------	-------------------	---

Nepenthes sibuyanensis Fascinating species with long burrowing tendrils bearing large pitchers with scalloped peristome. Pitcher colouration varies from pink or orange to deep red or purple.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3164	assorted clones	Random assortment from 24 clones.	Highland	S M L XL	A

Nepenthes singalana This Sumatran species usually has purple to red pitcher with a wickedly toothed peristome. Attractive even when young.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3170	Belirang, assorted clones	Random assortment from 9 clones. Broad-pitched form. Previously sold as N. singalana (Masurai).	Highland	S M	A
BE-3248	Tujuh, assorted clones	Random assortment from 6 clones. Narrow pitcher form. Dark purple pitchers with a wide peristome.	Highland	S	A

Nepenthes smilesii A soft leafed easy to grow species that has formerly been cultivated under the incorrect names of *Nepenthes anamensis* and *Nepenthes thorellii*. We find that it grows well for us in both our highland and lowland conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3313	Assorted clones. Dalat	A random selection from 3 clones. More robust growth than previously sold form. Leaves are soft in immature plants. Pitchers develop brilliant pink colouration as plant matures.	Intermediate	S M L	A
BE-3171	From seed, all different individuals	Dalat form. This is a more robust form developing more prolific leaves and pitchers than previous Catalogue item. Pitchers develop brilliant pink colouration as plant matures.	Intermediate	S M L	A
BE-3316	Phu Kradung, assorted clones	Pending further academic studies, we believe this species to conform to <i>N. smilesii</i> . A random mixture of clones and seed-grown plants.	Intermediate	S M	A

Nepenthes sp. #1 Bulbous red-striped pitchers which can reach over 30cm in length. Probable new species. Easy grower.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3172	assorted clones	Random assortment from 24 clones.	Highland	S M L	A

Nepenthes spathulata One of the largest highland species from Sumatra.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3175	clone 1, female	From a single clone.	Highland	S M L XL	A

Nepenthes spectabilis A classic species from northern Sumatra. There are a number of different forms but all have beautifully striped pitchers with a colourful peristome. This species is very striking and has been used to make some excellent hybrids in the past.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3321	Giant form. From seed, all individuals.	Bred from selected clones of our giant and exceptionally spectacular form of <i>N. spectabilis</i> , these plants will turn out to be truly magnificent if they resemble either of their parents. This is a very limited release, less than 90 plants total.	Highland	S	A
BE-3322	Giant form. Random assortment from 9 clones.	Bred from selected clones of our giant and exceptionally spectacular form of <i>N. spectabilis</i> , these plants will turn out to be truly magnificent if they resemble either of their parents. This is a very limited release from seed, less than 90 plants total!	Highland	S	A
BE-3179	North Sumatra, clone 1	Very handsome dark burgundy pitchers which widen gradually towards the mouth. Nice flared striped peristome.	Highland	M L XL	A
BE-3176	Pangulubao, from seed	Cylindrical pitchers which are heavily suffused with a network of dark purple brown patches. The peristome is thinner and more delicate than in other varieties of this species. Has an enormous and very distinctive pitcher spur. This variety is extremely vigorous and produces a huge number of pitchers on a single plant.	Highland	S M L	A
BE-3177	Sibuatan assorted clones	Random assortment from 5 clones. A relatively small and delicate form. The pitchers are cylindrical and richly coloured with black spots.	Highland	S M L	A

Nepenthes stenophylla A classic Bornean species with tubular red striped pitchers.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3184	Bareo, assorted clones	Random assortment from 12 clones.	Highland	S M	A

Nepenthes talangensis Beautiful classic highland species. The deeply inset peristome is usually a solid deep red, contrasting with the red and green speckled pitcher body.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3187	assorted clones	Random assortment from 24 clones	Highland	S M L	A

Nepenthes tentaculata A small delicate highland species. The pitchers sport bristles on the upper surface of the lids.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3192	Murud	Random assortment from 6 clones. Although this species has a small growth habit the plants are robust.	Highland	S M	A

Nepenthes thai A newly published species from Khao Ai Dang, Thailand. Similiar in appearance to *N. bensotonei*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3346	All different individuals from seed.	Limited release of less than 120 plants total.	Lowland	S M	A
BE-3364	assorted clones	A random assortment from 6 clones.	Lowland	S M L	A

Nepenthes tobaica A well-known species from the Lake Toba region of North Sumatra. It is one of the fastest growing highland species, and is readily adaptable to a variety of growing conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3264	green/orange assorted clones	Pitchers of these selected plants are mostly green through orange colouration	Intermediate	S M L	A

Nepenthes tomoriana An easy grower and rare in cultivation. Pitchers are almost brown when mature.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3200	clone 1	From a single clone.	Lowland	S	A

Nepenthes treubiana An extremely rare species which grows naturally on limestone cliffs in New Guinea. Never before offered from any nursery and practically unknown in cultivation. The fat pitchers can attain impressive sizes.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3340	Andamata, assorted clones.	From Andamata, Irian Jaya. A random selection from 5 clones.	Lowland	S M	A
BE-3341	Fak Fak, from seed.	From North of Fak Fak, Papua. All different individuals from seed. Limited release of less than 250 plants total.	Lowland	S	A

Nepenthes truncata This impressive species never fails to attract attention with its heart-shaped leaves and enormous pitchers. It is a reliable grower, being adaptable to varying conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3203	Pasian, assorted clones	This extremely rare highland variety is available from no other source. Pitchers are mostly colourful, ranging from orange through to dark red. Random assortment from 43 clones. Small size minimum diameter 5cm or 2".	Highland	S	A
BE-3307	'Queen of Hearts' x 'King of Spades'	Some time back we bred two of the only known seven plants in cultivation of this rarest of rare forms of <i>Nepenthes</i> . This form is so different to the usual form of <i>Nepenthes truncata</i> that it's arguably a unique species in its own right but for now we will use the accepted nomenclature. The area where this plant originated was devastated by logging activities in the late 1990s and this form is believed to be extinct in the wild. The 7 specimens, which are now 11 years old, were raised from seed in our nurseries. The female parent of this new release, known as 'Queen of Hearts', is very probably the most photographed <i>Nepenthes</i> in history, having appeared on several of our Chelsea Flower show exhibits and also as a centrepiece of our 2008 Singapore Garden Festival exhibit, where it was photographed by most of the 300,000+ visitors over the 8 day period of the show. The male parent named 'King of Spades' is actually darker in colouration than the female and has green wings. Differences in pitcher colouration, morphology, plant vigour and size when mature, can be expected to vary between individuals. This is a limited offer of seed-grown plants and once stocks are exhausted, it cannot be repeated for several years.	Highland	S	B

Nepenthes ventricosa Waisted pitchers with a waxy texture. This well-known species comes in a wide variety of colourations. It is probably one of the most hardy and forgiving of all highland *Nepenthes* and is therefore an ideal beginner's plant.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3217	assorted clones	Random assortment from 3 clones. Mostly red.	Highland	M L XL	A
BE-3278	Madja-as form. Random selection from 5 clones	This form of <i>Nepenthes ventricosa</i> has marked similarities to <i>Nepenthes burkei</i> from Mt Halcon. Taxonomists will be debating whether this is in fact a form of <i>Nepenthes burkei</i> but since that species is not recorded from Mt. Madja-as, for now we're labeling it as a form of <i>Nepenthes ventricosa</i> . The pitchers are all colorful, and there is some variation between the various clones.	Intermediate	S M L	A

BE-3215	red, clone 1	The best dark pink pitched form of the species. Robust, vigorous and beautiful. Excellent candidate for hanging baskets. From a single clone.	Highland	S M L XL	A
---------	--------------	---	----------	-------------------	---

Nepenthes vieillardii Small pretty species with striking blood red pitchers and dark green leaves. A challenge to grow well, you'll find our plants are healthy and vigorous thus giving you a good start.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3223	clone 2	From a single clone originating in Germany. We have recently found that this species grows equally well in both highland and lowland conditions.	Intermediate	S M	A

Nepenthes vogelii Newly described species from northern Sarawak. Lower pitchers are similar to that of *N. stenophylla* but upper pitchers have unique bulbous appearance with very dense black speckling.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3256	assorted clones	Random assortment from 20 clones.	Highland	S M L	A

Nepenthes hybrids

Nepenthes (veitchii x lowii) x spectabilis The three species that go to make up this hybrid all have strong distinctive characteristics. It's early days yet but our guess is that all the characteristics should be visible – the wide peristome of *Nepenthes veitchii*, the flared pitcher form of *Nepenthes lowii* and the vigour and rich patterning of *Nepenthes spectabilis*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3332	all individuals from seed	The female parent is a huge very eye-catching specimen and is one of the few plants in our nurseries that have caught rats on several occasions. The male is one of our unique line of giant <i>Nepenthes spectabilis</i> . So far we have only seen pitchers on medium sized plants but the characteristics are exactly as hoped in the species description above with patterned pitcher body and broad striped slightly toothed and ribbed peristome. This is a very limited release from seed of less than 100 plants in total.	Highland	S M	A

Nepenthes ampullaria x sibuyanensis

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3305	red assorted clones	This hybrid has stunning potential. At present they are an assortment of clones from tissue culture.	Lowland	S M	A

Nepenthes bellii x truncata A new and rather bizarre horticultural hybrid, since *Nepenthes bellii* is one of the smallest species in the genus and *Nepenthes truncata* one of the largest. They also have extremely different growth habits and general appearance, so it's anyone's guess how this hybrid will eventually turn out.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3330	black truncata parent, all individuals from seed	The male parent is the now famous black <i>Nepenthes truncata</i> 'King of Spades'. At the time of writing we only have small plants to look at and so far there is no sign of colouration on any of the pitchers. Should be an easy grower in either highland or intermediate conditions. This is a limited release of seed-grown individuals.	Intermediate	M	A

Nepenthes bicalcarata x (ampullaria x gracilis) SPECIAL OFFER FOR SEPTEMBER 2010 !
3 for 2 on size M or Larger

Natural hybrid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3032	speckled, assorted clones	Interesting small pitchers with consistently nice spotted colouration and tiny vestigial fangs.	Lowland	S M L XL	A

Nepenthes bicalcarata x ampullaria Very rare natural hybrid with gobose pitchers of *N. ampullaria*. Adult pitchers show vestigial fangs of *N. bicalcarata*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3033	speckled	Pitcher colouration is yellow-green throughout with light speckling. From a single clone.	Lowland	S M	A

Nepenthes boschiana x densiflora Even at young size, this new hybrid has attractive red pitchers and red colouration in the new leaves.

Cat. #	Selected From	Item Description	Climate	Size	Category

Nepenthes densiflora x truncata Another brand new horticultural hybrid from the Borneo Exotics stable between two species both having amongst the largest flared peristomes in the entire genus. This cross should be large with truly magnificent form.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3329	from seed, all individuals	The female parent is a superb dark purple <i>Nepenthes densiflora</i> and the male parent is a giant black <i>Nepenthes truncata</i> with the cultivar name 'King of Clubs'. This is very similar in appearance to <i>Nepenthes truncata</i> 'King of Spades' which has recently become quite famous as the male parent to the first seedlings of black <i>Nepenthes truncata</i> ever produced in cultivation; (see BE-3307). This is a limited release of all different individuals from seed.	Highland	S M L	B

Nepenthes inermis x bongso Vigorous attractive dwarf natural hybrid with unusual dark purple pitchers.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3086	clones 1,2	clones 1 and 2	Highland	S M L	A

Nepenthes inermis x singalana This rarely occurring natural hybrid has deep purple lower pitchers with near-black peristome.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3087	assorted clones	Random assortment from 4 clones. Small size minimum diameter 5cm or 2".	Highland	S M L	A

Nepenthes Lady Pauline From a single carefully selected superlative clone of *N. talangensis x maxima*, embodying the best characteristics of both parent species. We have used this hybrid in numerous international displays and it always attracts huge attention.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3188	cuttings, single clone	Established plants derived from cuttings bearing lower pitchers.	Intermediate	L XL	A
BE-3298	single clone, from tissue culture	The same clone as BE-3188 but now from tissue culture and will be available at a range of different sizes.	Intermediate	L XL	A

Nepenthes macrovulgaris x reinwardtiana This naturally occurring hybrid has colourful pitchers and is very vigorous. Pitcher form varies from nearly *N. macrovulgaris* through to nearly *N. reinwardtiana*. We have recently found that it grows well in both highland and lowland conditions.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3108	natural hybrid	Random assortment from 12 clones.	Intermediate	S	A

Nepenthes mirabilis var. echinostoma x rafflesiana NEW FOR June 2010
A very attractive natural hybrid with *N. rafflesiana var. Elongata*. The upper pitchers are very elegant and slender with broad peristome and prominent ribs.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3371	From a single clone.	NEW FOR JUNE 2010 We thought we had lost this lovely natural hybrid about 10 years ago but it recently reappeared in our archive materials and we are delighted to be able to reintroduce it to cultivation.	Lowland	S M	A

Nepenthes muluensis x lowii Very rare natural hybrid with dark purple extremely tough pitchers. Pitchers have great colouration even when plants are small, so this hybrid is the best candidate we know of for a terrarium *Nepenthes*. Highly recommended. More vigorous than either parent species.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3128	assorted clones	Random assortment from 3 clones.	Highland	S M	A

Nepenthes sibuyanensis x copelandii This unusual looking hybrid is very variable with peristomes ranging from deep red and narrow to yellow, wide and scalloped. The characteristic robust pitcher quality and the rotund pitcher shape of the female parent is retained in this tough hybrid.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3296	assorted clones, random selection	BE horticultural cross, April 2005.	Intermediate	S M L	A

Nepenthes sibuyanensis x mira Two very attractive but quite challenging species from different areas of the Philippines were combined to make this cross, which should be easier to grow and pitcher than either of its parents.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3331	all individuals from seed	A gorgeous orange <i>Nepenthes sibuyanensis</i> was pollinated with our best selected clone of <i>Nepenthes mira</i> . The offspring are still young but colouring up as hoped. This is a limited release of less than 100 individuals from seed.	Highland	S M L	A

Nepenthes sibuyanensis x spectabilis From a carefully selected colourful clone of *N. sibuyanensis* crossed with our giant form of *N. spectabilis*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3366	from a single clone	Pitcher colouration seems very promising.	Highland	S M	A

Nepenthes sibuyanensis x ventricosa BE horticultural cross.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3281	Assorted clones	A random selection. A vigorous easy grower. The best from both parents. Vigorous growth as in <i>N. Ventricosa</i> with generally broader less waisted pitchers. All pitchers have brilliant pink colouration. Generally pitchers are more prolific as seen in <i>N. Ventricosa</i> .	Highland	S M L XL	A
BE-3167	From seed, all different individuals	Both parents have good red colouration, although at the time of writing the colouration of this hybrid is not yet apparent and may vary considerably between individuals. A vigorous easy grower suited to both intermediate and highland conditions. DW note see BE 3281 on Catalogue.	Highland	S L XL	A

Nepenthes spathulata x glandulifera NEW FOR JUNE 2010
Two really large and spectacular species are crossed to make this hybrid a sure winner. Even young seedlings show good form and colouration.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3368	All different individuals from seed.	BE <i>N. spathulata</i> stock plant clone #2 crossed with BE <i>N. glandulifera</i> stock plant clone #1.	Highland	S M	A

Nepenthes spathulata x gymnamphora Another new hybrid from the Borneo Exotics stable.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3355	All different individuals from seed.	It's as yet too early to tell how this hybrid will look but both parent plants are exceptional specimens of their species. All different individuals from seed. Limited release of less than 100 plants total.	Highland	S M L	A

Nepenthes spathulata x mira BE horticultural cross

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3269	mostly from seed	Another creation from the BE stable. If you like orange pitchers, this one is for you! The wide peristome of <i>Nepenthes spathulata</i> and the unique orange colouration of <i>Nepenthes mira</i> make a striking combination. At present supply is very limited from seed-grown plants.	Highland	S M L XL	A

Nepenthes spathulata x spectabilis BE horticultural cross with giant *N. spectabilis*. The male parent giant *spectabilis* lends the usually green pitcher body of *N. spathulata* some striped characteristics. The peristomes are wonderfully striped red and orange with variations to the deep burgundy usual in *N. spathulata*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3270	From seed, all different individuals	Some really interesting peristome colourations have appeared in this BE cross.	Highland	S M L	A
BE-3314	Selected clones	First issue of a random selection from 7 clones.	Highland	S M L XL	A

Nepenthes spectabilis x aristolochioides The female parent is a giant form of *N. spectabilis*. Pitchers have strong characteristics of *N. aristolochioides* with rich dark mosaic patterning. The plant has the robust characteristics of its female parent.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3180	assorted clones	Random assortment from 7 clones.	Highland	S M	A

Nepenthes spectabilis x mira The female parent is a giant form of *N. spectabilis*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3181	From seed, all different individuals	The pitchers are variable with some of an orange hue resembling the colouration of <i>N. mira</i> and others have a rich dark mosaic patterning on a green background as on <i>N. spectabilis</i> .	Highland	S M L XL	A

Nepenthes spectabilis x talangensis BE horticultural cross with giant *N. spectabilis* as female parent. The peristomes can be either a deep uniform red or various shades of red blending into yellow.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3310	Assorted clones and misc. seed	A random assortment of clones. Mature pitchers develop the characteristic shape of giant <i>spectabilis</i> . The broad peristome colourations compound a wide variety of sunset hues and candy stripes creating a dramatic contrast to the vivid lime edges. A spectacular addition to any collection.	Highland	S M L XL	A

Nepenthes talangensis x spectabilis A particularly attractive new horticultural cross with our giant *N. spectabilis*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3272	assorted clones	A random assortment from 2 clones.	Highland	S M	A

Nepenthes talangensis x veitchii The *N. veitchii* parent is a spectacular highland form with striped peristome, so we have high hopes for this hybrid, although we haven't yet raised one to sufficient size to see the characteristics.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3190	from a single clone	From a single tissue cultured clone.	Highland	S M L XL	A

Nepenthes veitchii x maxima A nice horticultural cross with wide striped peristome.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3334	from a single selected clone	Obtained from a third party, details of parents is unknown but this clone has a wide red peristome with burgundy stripes.	Highland	S	A

Nepenthes veitchii x platytila The *N. veitchii* parent is a spectacular highland form with striped peristome, so we have high hopes for this hybrid, although we haven't yet raised one to sufficient size to see the characteristics.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3213	assorted clones	2007 Another new introduction to our catalogue. Random assortment from 7 clones.	Highland	S M	A

Nepenthes ventricosa x (ramispina x sanguinea) Judging from the parentage, this cross doesn't sound particularly exciting but we have been pleasantly surprised. Colouration varies between individuals with all being deep purple flecked on backgrounds varying from green to purple. Vigorous and easy as you might expect.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3367	all different individuals from seed	A limited release of seed grown individuals of less than 200 plants total.	Intermediate	S M	A

Nepenthes ventricosa x glandulifera **NEW FOR JUNE 2010**
The vigour and temperature tolerance of the female parent combined with the unique attractiveness of the male parent combine to make this a very interesting new cross.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3369	All different individuals from seed.	BE <i>N. ventricosa</i> clone # 2 crossed with BE <i>N. glandulifera</i> clone # 1.	Intermediate	S M	A

Nepenthes ventricosa x mira Even pitchers on young plants are of a uniform intense orange.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3220	assorted clones, random selection	BE horticultural cross Oct 2007.	Intermediate	S M L XL	A

Nepenthes ventricosa x sibuyanensis Pitchers on young plants are showing good colouration already. It is not yet known how this new hybrid will differ from the earlier BE cross *N. sibuyanensis x ventricosa*.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3295	assorted clones, random selection	BE horticultural cross, April 2007.	Intermediate	S M L	A

Nepenthes ventricosa x singalana The *N. singalana* lends it's deep colouration to this hybrid, even pitchers on small plants are a gorgeous plum red.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3293	assorted clones, random selection	BE horticultural cross Oct 2007. Male parent is robust broad-pitched form of <i>N. singalana</i> .	Intermediate	S	A

Nepenthes ventricosa x spectabilis This is a hugely vigorous hybrid with many of the best characteristics of both species, having durable flecked pitchers. It's expected to be similar in appearance to *Nepenthes 'Caslin Goo'*, which is the reverse cross which we released some time ago but possibly even more vigorous. Suitable for hanging baskets and public sales.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3320	From seed, all individuals.	The male parent is our spectacular giant form of <i>N. spectabilis</i> , so these should turn out to be very large. Limited release as seed-grown individuals.	Intermediate	S M L	A
BE-3324	From seed, all individuals.	The male parent is our elegant BE-3179. This is a limited release from seed.	Highland	S M L	A

Nepenthes ventricosa x talangensis This new hybrid was made using our best red form of *N. ventricosa* and a *N. talangensis* chosen for its vigour. So far, all the pitchers are colourful and usually have a brilliant pink peristome.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3323	From seed - all individuals.	Horticultural hybrid.	Highland	S M L	A

Nepenthes ventricosa x truncata This is only the third "black truncata" hybrid ever released. The female parent is our best red *N. ventricosa*, male is the superlative enormous *N. truncata* 'King of Spades'. This will be vigorous, large and beautiful.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3333	All different individuals from seed.	Limited release of all different individuals from seed.	Highland	S M	B

Nepenthes x hookeriana Classic natural hybrid between *N. rafflesiana* and *N. ampullaria* with pitchers embodying the best characteristics of both parent species. Pitcher colouration can vary enormously.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3349	Harlequin red, from a single clone.	As for BE-3354 but from a single selected clone. This is the best colouration of this variety we have seen.	Lowland	S M	A

Nepenthes x kuchingensis A natural hybrid between *N. ampullaria* and *N. mirabilis*, it was first recorded in Brunei in the 1980s but subsequently named after it was also discovered near Kuching in Sarawak.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3230	var. echinostoma, single clone	The <i>N. mirabilis</i> parent in this rare version of the natural hybrid found in Brunei is var. echinostoma, which makes for a very interesting pitcher form. Easy and vigorous, with broad peristome and red flecked pitchers. An ideal beginner's lowland plant. From a single clone.	Lowland	S M L XL	A

Nepenthes x Singapore GardenTech The first cross between *N. ampullaria* 'Brunei red' and a colourful *N. ventricosa*, yielding very vigorous plants, some with outstanding bright red pitchers. Other colourations such as green, pink and striped peristome have also been selected. Trials have shown that this hybrid grows equally well under both highland and lowland conditions. It has the very desirable trait of producing basal rosettes, so can be grown in a variety of ways, either for hanging baskets, or as a compact plant for its basal rosettes and few leaves, or a combination of both.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3300	green/pink assorted clones	A random selection, from 3 clones. An intriguing green form, as immature plants have darker green leaves than the red pitcher form, with an additional all-over wash of pale pink, appearing on leaves and pitchers. In our experience, as this form matures, the majority lose their pink hue and develop green leaves and pitchers.	Intermediate	S M	A
BE-3292	red assorted clones	This form bears brilliant all red pitchers.	Intermediate	S M L	A

Nepenthes x trusmadiensis *N. x trusmadiensis* = *N. macrophylla* x *lowii*
We are proud to announce the first commercial release of one of the most desirable and spectacular of all known natural hybrids. These plants are available as 2 clones out of tissue culture and are more vigorous than either parent species. Although small, with most plants being a little over 2.5cm (1") in diameter, they are extremely hard, having been nursery grown for about 1 year. The female parent is *N. macrophylla*.

Cat. #	Selected From	Item Description	Climate	Size	Category

BE-3275	Clone 2, Trusmadi	From a single clone out of tissue culture	Highland	S	C

Heliamphora

Heliamphora heterodoxa x minor

As this is a horticultural hybrid, it's an easy grower compared with the parent species. *H. minor* is the dominant parent in the appearance.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3246	typical	From a single clone out of tissue culture. All sizes have a minimum of 5 pitchers. Small size are nursery hardened plants, bearing immature pitchers 2cm - 4cm in length. Medium size plants have clusters containing at least 1 mature pitcher of 4cm - 7cm in length. Large size plants have clusters containing at least 3 mature pitchers minimum 7cm in length.	Highland	M	A

Heliamphora minor

The smallest of the species, It forms very attractive clusters of pitchers with colouration varying from green to dark red.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3250	typical	From a single clone out of tissue culture. All sizes have a minimum of 5 pitchers. Small size are nursery hardened plants, bearing immature pitchers 2cm -4cm in length. Medium size plants have clusters containing at least 1 mature pitcher of 4cm - 7cm in length. Large size plants have clusters containing at least 3 mature pitchers minimum 7cm in length.	Highland	S M	A

Heliamphora nutans

Originating from Germany in tissue culture. Localle unknown.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3251	typical	All sizes have hardened clumps of immature pitchers. Small sizes have a minimum of 5 nursery hardened immature pitchers 3cm - 5cm in length in a cluster 2.5cm - 5cm in width. Medium size have a minimum of 10 nursery hardened immature pitchers 3cm - 5cm in length in a cluster 8cm-10cm in width. Small plants minimum 5 pitchers. Medium size nursery hardened immature pitchers 3cm-5cm in length, clump 8cm-10cm in width, Meium plants have a minimum of 10 pitchers.	Highland	S	A

Heliamphora sp. Yuruani B

Obtained from Germany in tissue culture. Localle unknown.

Cat. #	Selected From	Item Description	Climate	Size	Category
BE-3249	typical	From a single clone out of tissue culture. All sizes have a minimum of 5 pitchers. Small size are nursery hardened plants, bearing immature pitchers 2cm -4cm in length. Medium size plants have clusters containing at least 1 mature pitcher of 4cm - 7cm in length. Large size plants have clusters containing at least 3 mature pitchers minimum 7cm in length.	Highland	XL	A
